**Learning Style:** On Demand

**Technology:** Cisco

**Difficulty:** Intermediate

**Course Duration:** 40 Hours

## Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR) v1.0 - On Demand

### About this course:

The Implementing and Operating Cisco Service Provider Network Core

Technologies (SPCOR) v1.0 course teaches you how to configure, verify, troubleshoot, and optimize next-generation, Service Provider IP network infrastructures.

It provides a deep dive into Service Provider technologies including core architecture, services, networking, automation, quality of services, security, and network assurance.

This course also helps you prepare to take the Implementing and Operating Cisco Service Provider Network Core Technologies (350-501 SPCOR) exam, which is part of the new CCNP Service Provider and Cisco Certified Specialist – Service Provider Core certifications.

## **Course Objective:**

After taking this course, you should be able to:

- Describe the service provider network architectures, concepts, and transport technologies
- Describe the Cisco IOS software architectures, main IOS types, and their differences
- Implement Open Shortest Path First (OSPF) in the service provider network
- Implement Integrated Intermediate System-to-Intermediate System (IS-IS) in the service provider network
- Implement Border Gateway Protocol (BGP) routing in service provider environments
- Implement route maps and routing policy language
- Describe IPv6 transition mechanisms used in the service provider networks
- Implement high-availability mechanisms in Cisco IOS XR software
- Implement traffic engineering in modern service provider networks for optimal resource utilization
- Describe segment routing and segment routing traffic engineering concepts
- Describe the VPN technologies used in the service provider environment
- Configure and verify Multiprotocol Label Switching (MPLS) L2VPN in service provider environments
- Configure and verify MPLS L3VPN in service provider environments
- Implement IP multicast services
- Describe the quality of service (QoS) architecture and QoS benefits for service provider networks
- Implement QoS in service provider environments
- Implement control plane security in Cisco devices
- Implement management plane security in Cisco devices
- Implement data plane security in Cisco devices
- Describe the Yet Another Next Generation (YANG) data modeling language
- Implement automation and assurance tools and protocols
- Describe the role of Cisco Network Services Orchestrator (NSO) in service provider environments
- Implement virtualization technologies in service provider environments

## **Audience:**

- Network administrators
- Network engineers
- Network managers
- System engineers
- Project managers
- Network designers

## **Prerequisite:**

Before taking this course, you should have the following knowledge and skills:

- Intermediate knowledge of Cisco IOS or IOS XE
- Familiarity with Cisco IOS or IOS XE and Cisco IOS XR Software configuration
- Knowledge of IPv4 and IPv6 TCP/IP networking
- Intermediate knowledge of IP routing protocols
- Understanding of MPLS technologies
- Familiarity with VPN technologies

## **Course Outline:**

- **Describing Service Provider Network Architectures**
- **Describing Cisco IOS Software Architectures**
- **Implementing OSPF**
- **Implementing IS-IS**
- **Implementing BGP**
- **Implementing Route Maps and Routing Protocol for LLN [Low-Power and Lossy Networks] (RPL)**
- **Transitioning to IPv6**
- **Implementing High Availability in Networking**
- **Implementing MPLS**
- **Implementing Cisco MPLS Traffic Engineering**
- **Describing Segment Routing**
- **Describing VPN Services**
- **Configuring L2VPN Services**
- **Configuring L3VPN Services**
- **Implementing Multicast**
- **Describing QoS Architecture**
- **Implementing QoS**
- **Implementing Control Plane Security**
- **Implementing Management Plane Security**
- **Implementing Data Plane Security**
- **Introducing Network Programmability**
- **Implementing Automation and Assurance**
- **Introducing Cisco NSO**
- **Implementing Virtualization in Service Provider Environments**

## **Credly Badge:**

## **Display your Completion Badge And Get The Recognition You Deserve.**

Add a completion and readiness badge to your LinkedIn profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
