## Access 2016 Advanced - Part 1

## About this course:

This is the first in a series of advanced Access 2016 courses, aimed at increasing your proficiency in managing databases within Microsoft's popular business program. Learn to create and design a database, explore tables and forms, query data, create advanced reports, and use Macros to develop automation.

Access is a database creation and management program. It helps you design and build a robust database to help your organization run smoothly. Many small to medium-sized businesses use Access for this exact purpose.

## Course Objective:

In this course, you will learn to create and manage a fundamental Access 2016 database.

You will:

- Customize a form layout to improve usability and efficiency of data entry.
- Share data across applications.
- Use macros to improve user interface design.
- Use VBA to enhance tasks.
- Organize data into appropriate tables to ensure data dependency and minimize redundancy.
- Lock down and prepare a database for distribution to multiple users.
- Create and modify a database switchboard and set the startup options.

## Audience:

Students taking this course are database administrators or prospective database administrators who have experience working with Access 2016 and need to learn advanced skills.

## Prerequisite:

To ensure your success in your course you should have experience working with Microsoft Access 2016, including a working knowledge of database design and creation, form design and creation, report design and creation, a working knowledge of database querying and the various table relationships.
