Learning Style: Virtual Classroom

Technology: Red Hat

Difficulty: Advanced

Course Duration: 5 Days

RHCSA Rapid Track Course (RH199VT)

About this course:

This course is the combination of Red Hat System Administration I and II at a rapid speed. This course is designed for the student who are fairly experienced with Linux administration. The course reviews the tasks covered in Red Hat System Administration I (RH124) and Red Hat System Administrator II (RH134) at high speed pace. This course also prepares the students for the Red Hat EX200: Certified System Administrator (RHCSA) exam.

Note: This course builds on a student's existing understanding of command-line based Linux system administration. Students should be able to execute common commands using the shell, work with common command options, and access man pages for help.

The average salary for a Linux Systems Administrator, Red Hat Certified Engineer is **$72,762** per year.

Course Objective:

After completing this course, students will be able to:

- Managing users and groups, files, and file permissions
- Updating software packages with yum
- Managing and troubleshooting systemd services during the boot process
- Network configuration and basic troubleshooting
- Managing local storage and creating and using file systems
- Firewall management with firewalld
- Managing kernel-based virtual machines (KVMs)
- Automating installation of Red Hat Enterprise Linux using Kickstart

Audience:

This course is intended for:

- Students for this class should have 1-3 years of full time Linux administration experience

Prerequisites:

- Students attending this course should have basic experience with the following, with minimal dependence on documentation:
- Linux (some of the course may be review)
- The bash shell, including job control (&, fg, bg, jobs), shell expansion (command, tilde, globbing, brace, protection from expansion), I/O redirection, and pipes
- IPv4 networking addressing and routing concepts, TCP/UDP, and ports
- Navigation of the GNOME 3 interface
- Editing text files from the command line with vim or other available programs
- Finding information in man pages and info nodes
- The concept of file permissions
- Interactive installation of Red Hat Enterprise Linux
- Per-user 'at' and 'cron' jobs
- Use of archival utilities such as 'tar', 'zip', and compression utilities
- Absolute and relative paths
    - Finding files with 'find' and 'locate'

Suggested prerequisites courses:

- Red Hat System Administration I (RH124)
- Red Hat System Administrator II (RH134)

Course Outline:

Accessing the command line
Log in to a Linux system and run simple commands using the shell.
Managing files from the command line

Work with files from the bash shell prompt.

Managing local Linux users and groups

Manage Linux users and groups and administer local password policies.

Controlling access to files with Linux file system permissions

Set access permissions on files and interpret the security effects of different permission settings.

Managing SELinux security

Use SELinux to manage access to files and interpret and troubleshoot SELinux security effects.

Monitoring and managing Linux processes

Monitor and control processes running on the system.

Installing and updating software packages

Download, install, update, and manage software packages from Red Hat and yum package repositories.

Controlling services and daemons

Control and monitor network services and system daemons using systemd.

Managing Red Hat Enterprise Linux networking

Configure basic IPv4 networking on Red Hat Enterprise Linux systems.

Analyzing and storing logs

Locate and interpret relevant system log files for troubleshooting purposes.

Managing storage and file systems

Create and use disk partitions, logical volumes, file systems, and swap spaces.

Scheduling system tasks

Schedule recurring system tasks using cron and systemd timer units.

Mounting network file systems

Mount network file system (NFS) exports and server message block (SMB) shares from network file servers.

Limiting network communication with firewalld

Configure a basic local firewall.

Virtualization and kickstart

Manage KVMs and install them with Red Hat Enterprise Linux using Kickstart.

Credly Badge:

Display your Completion Badge And Get The Recognition You Deserve.

Add a completion and readiness badge to your Linkedin profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise

- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
